**Digital Check Introduces New Check Scanner for
Small Business Remote Deposit Capture Market**

--CheXpress offers financial institutions scanning device with improved price and performance--

LAS VEGAS, April 15, 2008 – Digital Check, a leading provider of [desktop check scanners](#) for the [remote deposit capture](#) and branch automation industry, announced an innovative new check scanner designed for the small business distributed check capture market. The new scanning device, CheXpress™, provides the high quality image capture capabilities required to perform efficient check truncation while adding a number of usability and energy efficient enhancements for support of small business banking customers using remote deposit capture services.

The CheXpress scanner offers a smaller footprint in comparison to other check scanners with features including dual scanning of images, dual check endorsement and dual MICR read technology that maximize image quality and accurately captures data. The energy efficient check scanner supports green initiatives with low power consumption and remote shutdown capabilities. The low noise device is an additional benefit for small office and home office environments.

An estimated 14.5 million small businesses are candidates for remote deposit capture, according to a recent survey conducted by Celent on small business remote deposit capture. Celent estimates a current adoption rate of less than one percent within this market segment. CheXpress expands Digital Check's product line with a device specifically designed for these small business customers. Offered at a lower price point, the scanner enables financial institutions to further promote distributed check capture applications within small businesses by providing a low maintenance, consumer-friendly product.

The CheXpress product encompasses numerous breakthroughs in design, engineering and manufacturing. Our goal for this scanner was to drive continued improvements in image quality while delivering a device that would be easier to operate for the small business customer,” stated John Gainer, Digital Check executive vice president. “The small business market sector represents the next big opportunity for remote deposit capture. We believe CheXpress will give our financial institution clients the ability to aggressively expand their penetration within the small business market.”

CheXpress units are currently being certified by Digital Check software partners. Shipments to customers will begin in July 2008.

About Digital Check

Digital Check is a leading manufacturer of distributed capture check scanners for branch automation and remote deposit capture applications. Digital Check’s TellerScan® series of electronic scanners provide the highest quality images, MICR accuracy, reliability, and lowest cost of ownership within the industry. It was the first company to introduce a desktop distributed capture device for the Check 21 industry, first to deploy at a teller window in a top 10 U.S. bank and the only U.S.-based manufacturer. The company’s scanners are available worldwide through a network of more than 70 Authorized Solutions Providers and are supported by Digital Check’s comprehensive fulfillment, training, support, warranty and repair services. For more information call 847-446-2285 or visit the company’s website at www.digitalcheck.com.
