

# Digital Check's CHECK JOGGER 250

## For Improved Scanner Performance

*Handles Batches of up to 250 Checks*

### Features:

- **Saves Time - 20% Greater Efficiency**
- **Easy to Use**  
*(Takes Just Seconds)*
- **Improves Performance**
- **Quiet Operation**  
*(For Branch or Back Office)*
- **Small Footprint**
- **Low Cost**
- **Handles Batches of 250 Checks**

DCC's new Check Jogger 250 has been designed as a small, simple to use, low cost jogger specifically for checks, giro's and remittance slips. The jogger improves scanner performance through helping align the edges of batches of items and the time required for overall preparation and alignment is reduced.

#### Saves Time

◆ Tests show that scanning productivity improves by approximately 20% if you use the Check Jogger 250 prior to placing the items in the scanner's autofeeder. Whether in the front-office or back-office, scanner users and your customers will benefit from using this jogger.

#### Easy to Use:

◆ The Check Jogger 250 features a simple to use loading tray with a momentary switch to make operation easy for tellers, branch personnel, and back office operators. The operator pops the checks into the hopper and presses the switch down for a couple of seconds to jog the documents.

#### Improves Performance:

◆ DCC's Check Jogger 250 does a more consistent job of aligning a variety of mixed sized items than the traditional approach of hand jogging. Because of this, the Jogger can reduce jams, helping to facilitate unattended operation of countertop check scanners as well as back office check or remittance processing equipment. Aligning the items assists with ensuring a straight scan, which will improve MICR reading, image quality and optical recognition.

#### Quiet...for Branch or Back Office

Special noise and vibration insulating material used in the Check Jogger 250 is designed to allow low noise level operation in any branch, back counter, or back office environment without disrupting operations. The Jogger is ideal for use in bank branch or back office operations, credit unions, lockbox operations, remittance processing applications, cashiers, Building Societies, Post Office operations, and many other commercial and point of sale applications.

#### Small Footprint and Low Cost:

◆ Convenient for many applications and locations, the small footprint (3" x 11"), makes the Check Jogger 250 fit virtually anywhere. Its ergonomic design blends into any branch or back office environment. The Check Jogger 250 is simple to use and low cost to allow operators in both large and small applications to improve their efficiency.

#### Handles up to 250 Items:

◆ The hopper holds up to 250 items of mixed sizes — making the Jogger ideal for batching. The cut-away design allows for easy loading and removal of items and ensures reliable, problem-free operation.

*Providing Check Scanning Solutions & Check Scanning Equipment Worldwide*

## Model CJ250 Specifications

### Product Features

#### Unit Materials:

- Heavy Duty Metal Base Casting
- Aluminum Platform
- Aluminum End Plate
- Sculpted Wood Sides
- Stainless Steel Actuator Bar

#### Paper Size:

- Document Height: Up to 4.00 inches (100mm)
- Document Length: Up to 9.00 inches (230 mm)

#### Hopper Capacity:

- Up to 250 items  
(Depending on document thickness and condition)

#### Variable

#### Jogging Cycle:

Momentary press bar allows for varying the jogging cycle time for each unique batch.

#### Electrical:

- Separate On / Off power switch
- Power indicator light on the front
- Power consumption: .35 amps
- Input voltage: 115 VAC (+/- 10%), 60 hz – US domestic  
230 VAC (+/- 10%), 50hz – international

#### Agency Approvals:

UL, CE

#### Environmental:

Temperature (operating):  
60-90 degrees F  
(15-32 degrees C)

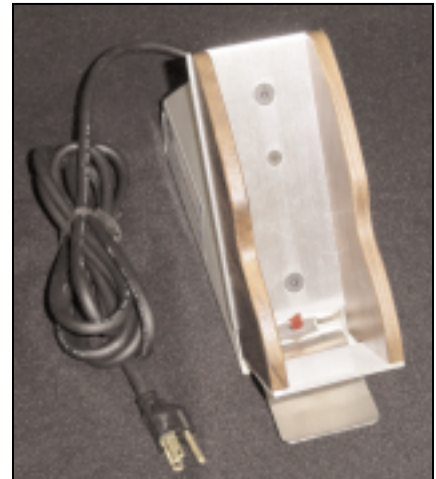

#### Humidity (operating):

35% - 85 %  
(non-condensing)

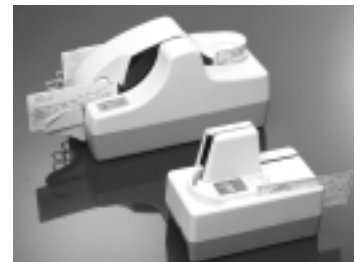

#### Check Jogger 250

#### Dimensions:

- Height – 7 inches
- Depth – 3 inches
- Length – 11 inches
- Weight – 10 lbs. (5.0 Kg)
