

XpressSCAN

BY DIGITALCHECK®

- Check capture made easy via a Digital Check brand of scanner and standard PC workstation
- End-to-end solution – capture, recognition, MICR correction, IQA, balancing/adjusting, X9.37 file
- Secure – SSL encryption
- Great for field/route teams receiving checks

Micro Elite

Expert Elite

XpressScan by Digital Check™ is a fully integrated check capture solution allowing your company and associates to scan in deposits utilizing a single-feed or batch scanner connected to a desktop workstation which works in tandem with smart safes and cash recyclers. Whether you have store clerks, route, or field associates needing to deposit checks at the end of a shift or workday, or any other situation in which employees need to scan checks for deposit using a shared scanner and interface, XpressScan is the flexible solution for your needs. If your organization needs a check capture solution that is reliable, available, easily supported, intuitive to use, and installs seamlessly, then XpressScan is for you.

How It Works

Simply sign in using an operator ID and password to launch the application on the PC workstation. The user interface prompts the operator to enter the deposit amount. Checks are captured on the Digital Check scanners and balanced to the deposit total entered by the operator. The XpressScan system allows operator to utilize all the following functions for check capture; MICR verification and editing, duplicate detection, IQA, and image disposition are in place for completion. XpressScan will show a final balancing screen to the operator for confirmation that all the checks are captured and the deposit is in balance. Finally, upon confirmation that the deposit is in balance the XpressScan system creates a bank specific X9.37 file and securely transmits it to the financial institution for posting, it's that easy!

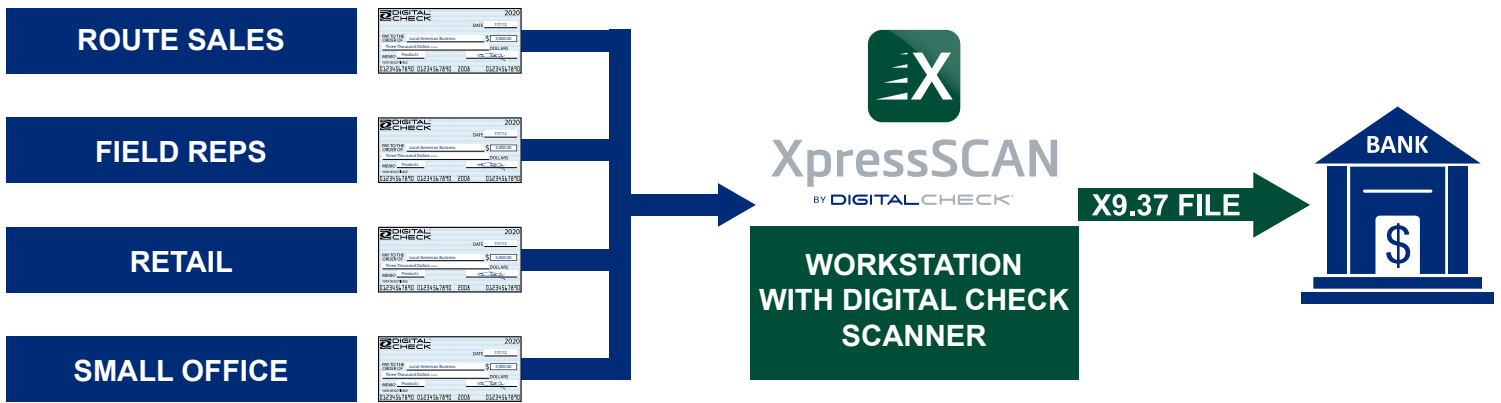

The XpressScan application also includes role-based rules for operator, supervisor and administrative functions for utilizing the application in daily production.

What's Included

XpressScan consists of two components: XpressScan Scan, the application that resides on the workstation; and the XpressScan website, the portal through which the operator initiates the transaction, balances, adjusts, and then submits the transaction. Hardware scanner configurations consist of either Digital Check's industry-leading SmartSource® Expert Micro Elite single feed or Expert Elite batch scanner connected to a PC workstation.

For more information about XpressScan or any of Digital Check's other check capture related products, please contact us at sales@digitalcheck.com or 847-446-2285.
